Dear Simon,

Thank you so much for allowing
US (Probus School) to visit your wind farm.
It was a once in a lifetime opportunity
So we're very grateful. The best part was
When we got to go up one, they were giant!

I learnt loads of facts, in fact so many
my head is still aching! I learnt from you
that they could be given the strength to survive
in any conditions... even in the sea!

My opinion is that wind power is the best
source of energy there is.

yours sincerely
Harry

Dear
Simon

Thank you so much for letting Probus school come and view your amazing wind farm. It was a once in a lifetime chance being able to go inside it so thanks for letting us take it. I have three facts that I thought were absolutely incredible. They were, Wind turbines have to have a ladder inside so you can climb up it, the wires on wind turbines go underground and the power from a wind turbine is programmed on a computer. My favourite part of the trip was when we got to stand inside and stare up and up and up inside at a long tube that looked like it would never end. After coming to visit you I really think that wind power is the best source of energy and I hope everyone else agrees.

Yours sincerely
Shannon

To Simon,

Thank you for inviting us to come to your wind farm last Friday. I understand it took weeks of planning to organise for us to come therefore I am honoured. It is very exciting being the first Primary school in Cornwall to go to a wind farm and to work with Cornwall light and power, so once again thank you!

In my time on the wind farm I learnt that a 65m wind turbine would cost about one million pounds. I never knew that wind turbines ~~were~~ had little computers inside and in fact I never thought it was possible to go inside a wind turbine at all!

My opinion on wind turbines now is that they are great because they are very eco friendly.

Yours sincerely,
Amelia

Dear Simon

Thank you so much for letting us be the first Primary school to visit your wind turbines. I learnt so much there and it was very exciting going up in the wind turbine.

I learnt that inside a wind turbine there is a computer which shows the speed of the blades. The wind turbines have 3 layers and the power they produce goes under ground.

My opinion is that wind turbines are phenomenal because there is no other way of producing power like them.

yours sincerely
Connor

Dear Simon,

Thank you so much for allowing Probus C.P School to travel up and get even closer to wind turbines than we had ever hoped. Thanks to you our heads are now crammed full of fascinating facts!

I learnt so many facts about turbines like: wind turbines always face the wind, turbines can be put everywhere in warm or cold countrys and also that 1-2-3 wind turbines could power the whole of Probus

My opinion is that from what you've told us wind turbines are definately the best!!!

Yours sincerely,
Josie
