

Dear reader.

I am writing in hope that you will support wind farms in the UK because they are our future electricity source.

Firstly, wind turbines are the cheapest way of producing electricity and they are reliable. For instance, one wind turbine will run for over 20 years or non-stop for 120,000 hours! The UK is one of the windiest countries in Europe so much so that this free fuel could be used over and over again. AND a wind turbine only takes 2 days to put up!

Furthermore wind turbines are supported by a lot of people. For example, 1 in 3 people want a wind turbine.

Just one turbine operates over 4.7 million units of electricity each and every year. That's enough to make 170 million cups of tea a year or to run a computer for over 160,000 years it could even meet electricity demands for over 1,000 homes. Surely that's enough to convince you!

Finally a wind turbine is not only cheaper than a power plant it's also better for people's health. Because power plants can trigger epileptic fits. With a wind turbine there are no known health issues.

67% of people support wind turbines why don't you?

**Yours faithfully
Charlie**
